

RE-DISS follow-up: The need for Future Governance

Christof Timpe / Dominik Seebach

RE-DISS II Final Webinar

28 September 2015

www.reliable-disclosure.org

Co-funded by the Intelligent Energy Europe
Programme of the European Union

What did RE-DISS II provide?

Communication platform

Background and analysis

Monitoring and data provision, e.g.

- Country profiles
- Annual residual mix data
- Environmental indicators

Recommendations and guidelines

- RE-DISS Best Practice Recommendations
- Starter Kit for Basic Implementers (BI)
- Proposal for recognition criteria
- Guidelines for the regulation of front side disclosure
- Disclosure guidelines for suppliers

Which further activities are helpful to support a reliable disclosure system after the end of RE-DISS?

- **Annual provision of disclosure-related data**
 - Task 1: Annual calculation of a European Attribute Mix, and of national residual mixes including envir. indicators
- **Housekeeping of recommendations and guidelines**
 - Task 2: Continuous maintenance of RE-DISS Best Practice Recommendations
- **Provision of a communication platform for Competent Bodies**
 - Task 3: Regular meetings / workshops (e.g. on annual basis) of European Competent Bodies for GO and for disclosure
- **Provision of background information**
 - Task 4: Continuous provision of up-to-date information on the national implementation of tracking and disclosure systems in individual European countries

The project team has prepared the RE-DISS legacy

For two of the identified tasks a responsible and competent executor has been found:

- Task 1: Annual calculation of a European Attribute Mix, and of national residual mixes including environmental Indicators
- Task 4: Continuous provision of up-to-date information on the national implementation of tracking and disclosure systems in individual European countries

The AIB is the right actor to take over these tasks.

- It is the independent umbrella organisation of Competent Bodies for GO (and for disclosure) with an indefinite lifetime.
- Many of the data and information needed for both tasks is available to AIB from internal sources or from its members.

The project team has prepared the RE-DISS legacy

Two other relevant tasks will be taken care of when needed:

- Task 3: Regular meetings / workshops of European Competent Bodies for GO and for disclosure
 - AIB GMs can provide part of the proposed exchange, but in practice they will only convene AIB members, EECS Hub Users and observers.
- Task 2: Continuous maintenance of RE-DISS Best Practice Recommendations
 - The RE-DISS BPR may need to adapt to changing requirements (further versions of the EECS Rules, revisions of European legislation and national frameworks, new market demands.
 - If there is a clear demand for such changes, then AIB or a group of Competent Bodies may initiate a revision of the BPR document.

A long story is coming to an end ...

The project team has prepared the RE-DISS legacy

- The RE-DISS team has met several times with AIB and is currently working on the handing over of knowledge, tools and data to AIB relating both tasks.
- AIB intends to calculate the annual data on Residual Mixes and to publish it in mid May X+1.
- AIB will also provide space on its website for publication of country specific information on the implementation of disclosure and GO policies / systems.
 - Countries which are neither AIB members nor EECS Hub Users will be offered to publish information under their own responsibility
